

Attachment #1 to
TID/SIEB-67/67

BEAR AIRCRAFT

1. The Bear aircraft has a camera bay assembly with seven ports in one 24 foot assembly. The probable cameras are:

- a. Dual pan cameras in ports 1 and 2
- b. Dual trackers in ports 3 and 4
- c. Dual pointing cameras in ports 5 and 6
- d. A long focal length strip camera or an infrared sensor in port number 7

2. Port number 7 may be a multi-purpose port since different configurations are evident on separate aircraft. There is also a side-looking radar visible on the aft portion of the aircraft.

BLINDER "A" AIRCRAFT

25X1D

The Blinder "A" aircraft on photo [REDACTED] has the same general configuration for the six visible camera ports that appear on the Bear "E". The measurements for these camera ports agrees very closely to the measurements shown on the Badger "F" diagram. The seventh port is either closed or non-existent. The entire camera bay appears to be the same as the Bear "E" camera bay, although the latch at the rear is not visible on this photo.

Attachment #3 to
TID/SIEB-67/67

BADGER "F" AIRCRAFT

1. The Badger "F" photo reconnaissance aircraft has one port on the side of the aircraft near the front that is probably a pointing type camera. This camera is visible on photo [REDACTED] 25X1D
The lens mount is [REDACTED] lens diameter. 25X1D
There is a second port [REDACTED] long for a vertical camera immediately behind the forward wheel well. This is probably the mount for a strip type camera. The bomb bay area where the camera assembly is installed is very comparable to the size of the camera assembly for the Bear "E". However, the dual camera ports visible in photo [REDACTED] are smaller than the ports on the Bear and Blinder aircraft. 25X1D
2. The Badger probably carries two pan cameras, left and right looking in ports 3 and 4; and two tracking cameras in ports 5 and 6. It is also possible that two of the ports could be used for infrared sensors.
